The Aberdeen Test Center (ATC) Fabrication Contract Awarded to STC

The U.S. Army has awarded the Machining, Welding, Painting and Fabrication Services Contract at the Aberdeen Test Center (ATC) to **Science and Technology Corporation (STC®)**. This five-year contract has an estimated value of \$38 million.

ATC is one of the foremost DoD test and training ranges, supporting both military and commercial materiel developers by testing a broad spectrum of equipment from concept through deployment. STC will provide high-quality, on-site services to the ATC Welding, Fabrication, Machining, and Paint Shops as part of an integrated team supporting the Automotive, Command Staff, C4ISR, Firepower, Plans & Ops, Survivability/Lethality, Test Technology, and Warfighter core competencies.

STC is a small business with a long history providing technical and management services to the Army and other Federal customers. STC's support at Aberdeen has included diverse support work in fields such as Test & Evaluation and Chemical/Biological detection. Outside of Aberdeen, STC provides multidisciplinary science, technology, fabrication, and management support services to other DOD Agencies, NASA, NOAA, EPA and FAA. Established in 1979, STC is headquartered in Hampton, Virginia with employees at fifteen locations across the U.S. This award adds an important facet to STC's complement of science, engineering, fabrication and technical support contracts.
